Release notes 1.0

15-12-2017

Introduction

Madaster strives to a continuous stream of releases with improvements or extension of functionalities. With each Madaster release, alterations will occur; visible or invisible to end users. This document provides an overview of the first release after the public launch at the end of September 2017.

Index

New functionalities

- Introduction wizard
- Renewed Dossier-tab
- Move building
- View switch

Changed functionalities

- Update General-tab
- Addition column Unkown
- Expansion upload functionality

Improvements

- Platform Stabilization

New functionalities

Introduction wizard

Users who register themselves for the first time on the Madaster platform are guided by a so-called 'wizard'. This wizard navigates them on their first visit through the necessary steps of the system: including adjusting a portfolio, uploading source files, adjusting building data, etc. This gives the new user a good understanding of the steps to take to register a building, the available functionalities and insight into the navigation structure.

INTRODUCTION

Welcome to Madaster. To guide you through the platform, we advise you to use this instruction wizard.

NO THANKS   START INTRODUCTION

Renewed Dossier-tab

In this release the Dossier tab has been extended and offers the end user much more options to search, share and archive building files and documents. In addition to the availability of a default folder structure, the user can also organize and adjust a personal folder structure in the new Dossier tab. Other functionalities that are introduced are: tagging (adding keywords to documents), filtering and downloading files. Finally, the activation and deactivation of source files has been made more convenient. This can now be done directly in the Dossier tab.

Move building

On the General tab, next to the existing 'Change building' button, a new 'Move building' button has been added. This offers users the option to move a building instantly to another portfolio within the user's own Madaster account.

View switch

On the Building- and Building Process-tab a view switch button is added that enables users to change the view of these tabs. The switch button makes it possible to rotate the axes of the tables on these tabs (horizontally to vertically and vice versa), so that the available information is readable in both ways.

Changed functionalities

Update General-tab

On the General tab (on building level) the following fields are added: MPG score, Building usage, Delivery date, Last renovation date and Restriction of public law. These fields can be filled in by the user. Finally, after completing the building's address in this tab, an Open street map image of the location is displayed.

Addition column Unkown

In the Building- and Circularity-tab the column 'Unknown' is added to the view. When a product or material in the imported (IFC) source file does not contain an NL-Sfb code, Madaster cannot determine in which building layer (categorization of Stewart Brand) this element is located. In this event, these materials and products are displayed in the 'Unknown' column.

Expansion upload functionality

The new upload functionality is aligned with the renewed Dossier tab. When uploading a file or document, the user can now directly indicate in which folder the file should be placed. In addition, the user has the option to link so-called 'tags' (keywords) to files. It is now also possible to upload multiple files simultaneously to the platform.

Improvements

Platform Stabilization

This release also delivers required platform stabilization, both on, database level, but also at visible elements on the platform.Additionally, the platform is further prepared to handle a growing set of future system users
